Recombinant ACOT1 protein (His tag)

Catalog Number	545327
Synonyms	Acyl-CoA thioesterase 1; CTE-I; CTE-Ib; Inducible cytosolic acyl-coenzyme A thioester hydrolase; Long chain acyl-CoA thioester hydrolase; Long chain acyl-CoA hydrolase; Palmitoyl-coenzyme A thioesterase
Species	Human
Expression System	E. coli
Accession	Q86TX2
Molecular Weight	Predictes a molecular mass of 47.80 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 48 kDa band.

Product Information

Sequence Region	2-421
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>88%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 2-421 aa (Q86TX2) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Recombinant Human Acyl-CoA Thioesterase 1 (ACOT1) Fragment (residues 2-421) is a high-purity protein designed for structural and biochemical studies. This soluble fragment retains catalytic activity and is ideal for investigating fatty acid metabolism regulation. Acyl-CoA Thioesterase 1 (ACOT1) is a cytosolic enzyme that hydrolyzes acyl-CoAs into free fatty acids and coenzyme A, playing a key role in maintaining intracellular lipid homeostasis. It exhibits preference for long-chain acyl-CoAs (C12-C20), influencing metabolic pathways and energy balance. The enzyme's localization in the cytosol underscores its accessibility for functional studies and its relevance in cellular lipid management.
