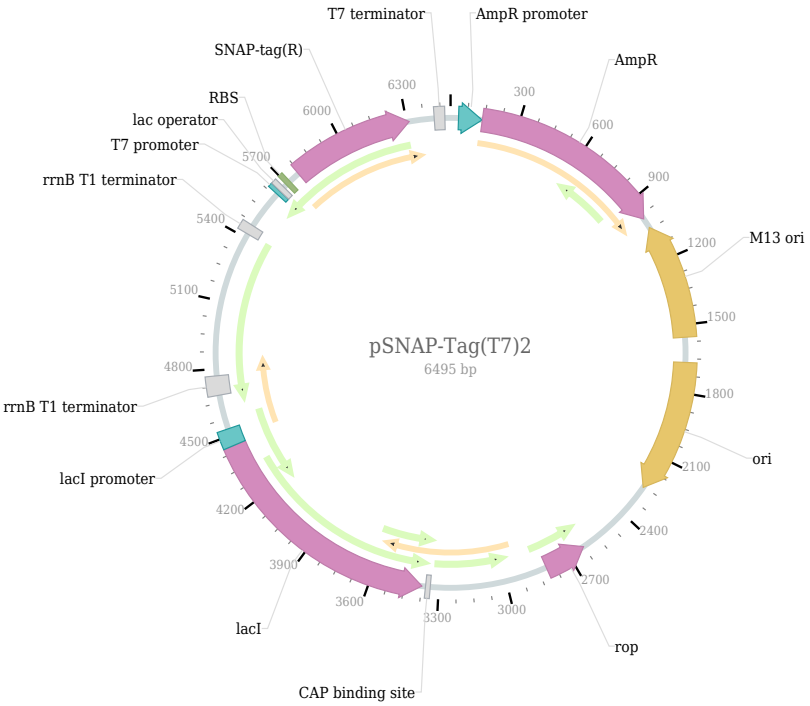
pSNAP-Tag(T7)2

Vector ID	V013280
Antibiotic Resistance	Ampicillin
Length	6495 bp
Host	E. coli

Product Information

Replication Origin	ori
Growth Strain(s)	DH10B
Growth Temperature	37℃
Comment	pSNAP-tag (T7)-2 is a T7-driven E. coli expression plasmid encoding SNAP26b, a 20-kDa engineered hAGT mutant. Genes cloned N- or C-terminally produce fusions that covalently and irreversibly capture benzylguanine- or benzylchloropyrimidine-conjugated probes of choice.

Vector Map



Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
