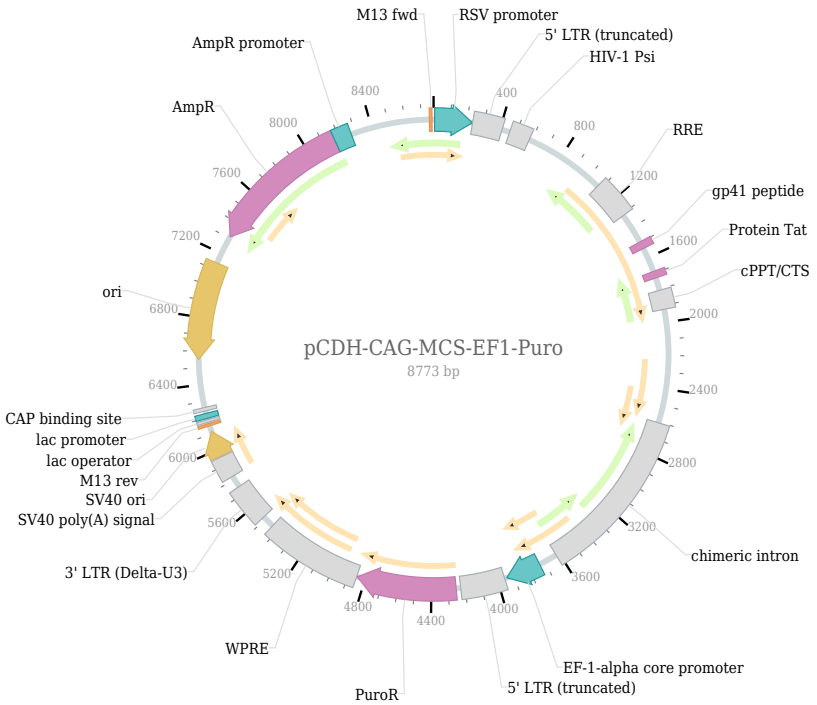
pCDH-CAG-MCS-EF1-Puro

Vector ID	V013654
Antibiotic Resistance	Ampicillin
Length	8773 bp
Vector Type	Protein expression
Host	Mammalian cells, Lentivirus

Product Information

Replication Origin	ori
Selection Marker	Puro
Promoter	CAG
Growth Strain(s)	Stbl3
Growth Temperature	37℃
Comment	pCDH-CAG-MCS-EF1-Puro is a lentiviral expression vector. It utilizes the CAG promoter for high-level gene expression in mammalian cells and contains a puromycin resistance marker (Puro) for selection. The vector is designed for generating stable cell lines and is maintained in bacteria with ampicillin resistance.

Vector Map



Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
