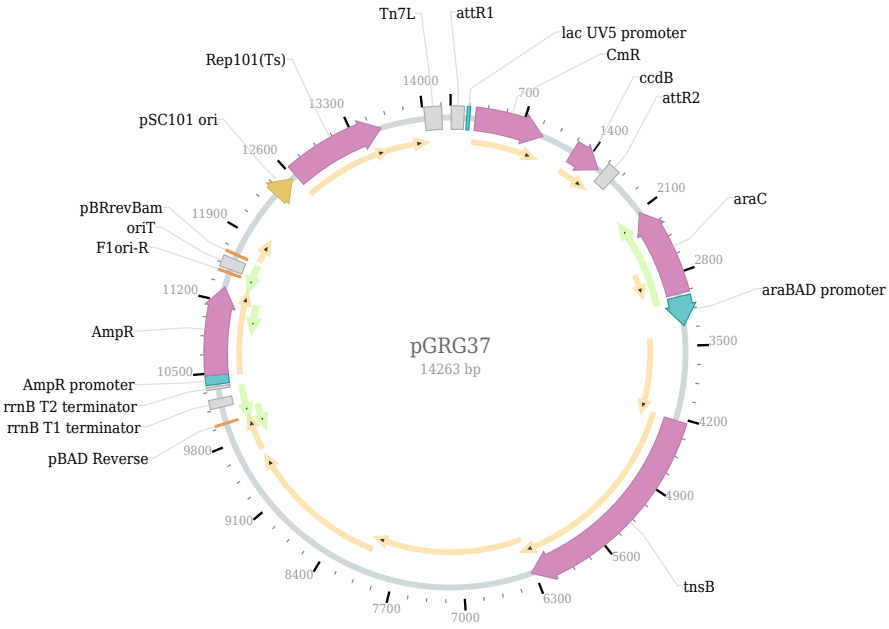
pGRG37

Vector ID	V007010
Antibiotic Resistance	Chloramphenicol, Ampicillin
Length	14263 bp
Vector Type	Bacterial Expression

Product Information

Replication Origin	pSC101 ori
Copy Number	Low Copy
Promoter	araBAD
Cloning Method	Gateway Cloning
5' Primer	na
Growth Temperature	30℃
Comment	pSC101 ori is a low-copy replication origin that requires the Rep101 protein, which is a temperature-sensitive protein. When bacteria containing a plasmid with this ori is cultured at 37℃, the plasmid will be lost.

Vector Map



Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
