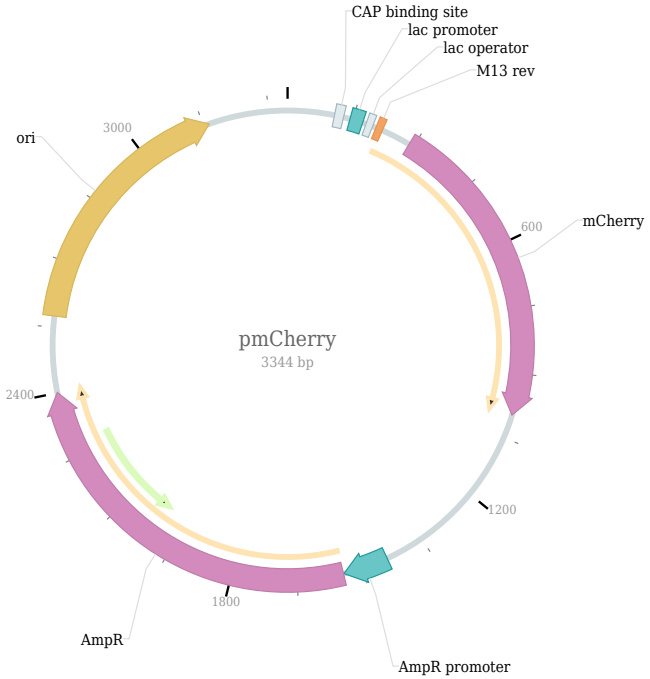
pmCherry

Vector ID	V011974
Antibiotic Resistance	Ampicillin
Length	3344 bp
Vector Type	Fluorescent Protein Genes & Plasmids

Product Information

Replication Origin	ori
Source/Author	Clontech
Copy Number	High copy number
Promoter	lac
3' Primer	M13 rev
Growth Strain(s)	Top10
Comment	pmCherry is a mammalian vector expressing mCherry, a bright monomeric red fluorescent protein derived from Discosoma DsRed (Shaner et al. 2004). Provides red fluorescent labeling of fusion proteins, promoter reporters, and multicolor live-cell imaging applications.

Vector Map



Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
