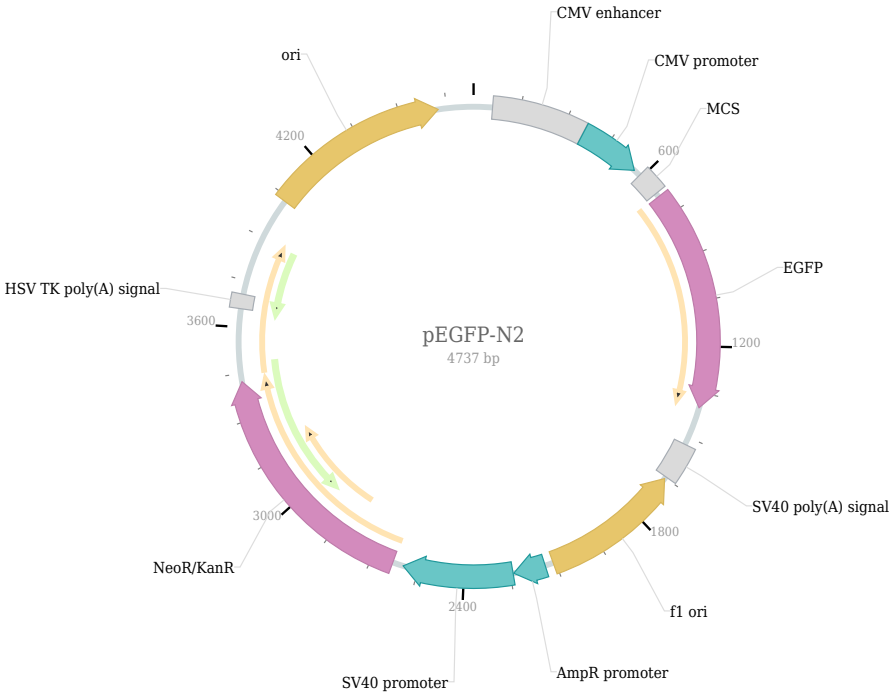
pEGFP-N2

Vector ID	V012020
Antibiotic Resistance	Kanamycin
Length	4737 bp
Vector Type	Fluorescent Protein Genes & Plasmids

Product Information

Replication Origin	ori
Source/Author	Clontech
Selection Marker	Neomycin/G418(Geneticin)
Copy Number	High copy number
Promoter	CMV
Growth Strain(s)	DH10B
Growth Temperature	37℃
Comment	pEGFP-N2 is a mammalian expression vector with CMV promoter, C-terminal EGFP green fluorescent protein fusion (protein-of-interest at N-terminus), Kan/Neo resistance, for subcellular localization and protein expression studies.

Vector Map



Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
