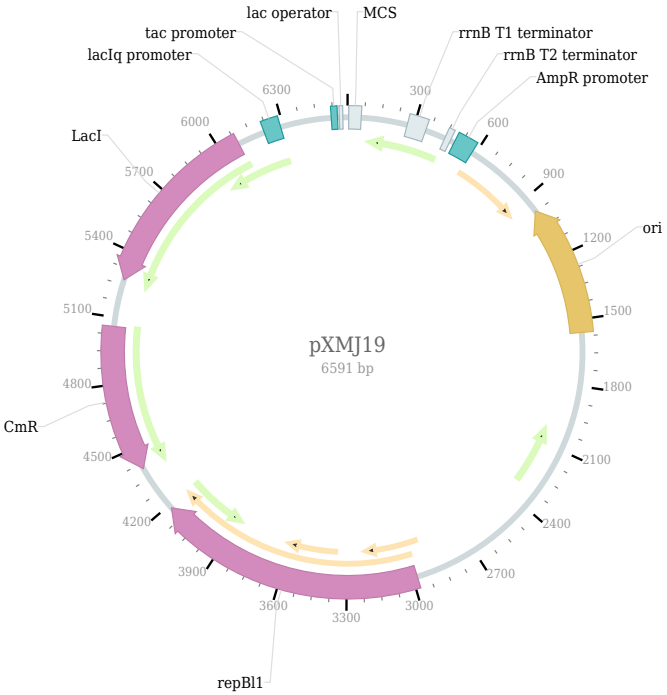
# pXMJ19

| | |
|---|---|
| **Vector ID** | V013071 |
| **Antibiotic Resistance** | Chloramphenicol |
| **Length** | 6591 bp |
| **Vector Type** | Protein expression |
| **Host** | Corynebacterium glutamicum |

## Product Information

| | |
|---|---|
| **Replication Origin** | ori |
| **Promoter** | Tac |
| **Growth Strain(s)** | DH10B |
| **Growth Temperature** | 37℃ |
| **Comment** | pXMJ19 is a plasmid that functions as a shuttle vector between Corynebacterium glutamiens and Escherichia coli. This biotechnological tool is tailored for growth in the DH5α strain and is cultured in LB medium at a temperature of 37 degrees Celsius. |

## Vector Map



## Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
