# Recombinant RNF38 protein (His tag)

| | |
|---|---|
| **Catalog Number** | 545898 |
| **Synonyms** | RING finger protein 38; RING-type E3 ubiquitin transferase RNF38 |
| **Species** | Human |
| **Expression System** | E. coli |
| **Accession** | Q9H0F5 |
| **Molecular Weight** | Predictes a molecular mass of 12.84 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 13 kDa band. |

## Product Information

| | |
|---|---|
| **Sequence Region** | 419-515 |
| **Form** | Lyophilized powder |
| **Formulation** | Lyophilized from sterile PBS, pH 7.4 |
| **Purity** | >86%, by SDS-PAGE with Coomassie Brilliant Blue staining. |
| **Endotoxin** | Not tested. |
| **Activity** | Not tested. |
| **Stability** | Samples are stable for up to twelve months from date of receipt at -70℃ |
| **Protein Construction** | DNA encoding 419-515 aa (Q9H0F5) were fused with 6His tag. |

## Storage & Handling

| | |
|---|---|
| **Reconstitution** | Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. |
| **Storage** | Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |
| **Shipping** | In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature.<br>Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise. |

## Description

| | |
|---|---|
| **Description** | This recombinant protein product features a 97-amino acid fragment (residues 419-515) of human E3 ubiquitin-protein ligase RNF38, a key enzyme in ubiquitination pathways. The fragment is computationally optimized for stability and solubility, making it ideal for structural biology studies and biochemical assays targeting ubiquitin-related mechanisms.<br>E3 ubiquitin-protein ligase RNF38 (EC 2.3.2.27) functions as a RING-type E3 ubiquitin transferase that ubiquitinates p53/TP53, facilitating its relocation to PML nuclear bodies. It exhibits a preference for the UBE2D2 E2 enzyme and is localized in the nucleus, underscoring its role in nuclear regulatory processes such as protein degradation and cellular signaling pathways. |
