# Recombinant EGG6 protein (His tag)

| | |
|---|---|
| **Catalog Number** | 535259 |
| **Species** | Caenorhabditis elegans |
| **Expression System** | E. coli |
| **Accession** | P90920 |
| **Gene ID** | 172670 |
| **Molecular Weight** | Predictes a molecular mass of 55.35 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 55 kDa band. |

## Product Information

| | |
|---|---|
| **Sequence Region** | 19-499 |
| **Form** | Lyophilized powder |
| **Formulation** | Lyophilized from sterile PBS, pH 7.4 |
| **Purity** | >90%, by SDS-PAGE with Coomassie Brilliant Blue staining. |
| **Endotoxin** | Not tested. |
| **Activity** | Not tested. |
| **Stability** | Samples are stable for up to twelve months from date of receipt at -70℃ |
| **Protein Construction** | DNA encoding 19-499 aa (P90920) were fused with 6His tag. |

## Storage & Handling

| | |
|---|---|
| **Reconstitution** | Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. |
| **Storage** | Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |
| **Shipping** | In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature.<br>Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise. |

## Description

| | |
|---|---|
| **Description** | Recombinant Leucine-rich repeat-containing protein egg-6 (egg-6) fragment (residues 19-499) from Caenorhabditis elegans. This 481-amino acid fragment is engineered for stability and solubility, making it ideal for structural studies and biochemical assays investigating extracellular matrix organization and epithelial junction maintenance.<br>The full-length Leucine-rich repeat-containing protein egg-6, encoded by the egg-6 gene in Caenorhabditis elegans, plays a critical role in apical extracellular matrix organization and the maintenance of epithelial junctions. It is localized to the apical cell membrane as a single-pass type I membrane protein, underscoring its importance in cellular structure and integrity. This recombinant fragment provides a functional unit for exploring these essential biological processes in research applications. |
