Recombinant CCD73 protein (His tag)

Catalog Number	551552
Synonyms	Sarcoma antigen NY-SAR-79
Species	Human
Expression System	E. coli
Accession	Q6ZRK6
Molecular Weight	Predictes a molecular mass of 45.79 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 53 kDa band.

Product Information

Sequence Region	1-374
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>89%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 1-374 aa (Q6ZRK6) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	This product is a high-quality recombinant protein fragment of human Coiled-coil domain-containing protein 73 (CCDC73, also known as Sarcoma antigen NY-SAR-79). The fragment comprises amino acids 1-374, representing a stable and soluble unit computationally selected for optimal performance in structural and biochemical studies. Coiled-coil domain-containing protein 73 (CCDC73) is a human protein identified as Sarcoma antigen NY-SAR-79. While a detailed functional summary and subcellular location for the full-length protein are not fully characterized in the provided data, proteins containing coiled-coil domains are typically involved in critical cellular processes such as structural organization, intracellular transport, and signal transduction. The NY-SAR-79 antigen designation suggests relevance in immunological and oncological research, particularly in the context of sarcoma. This recombinant fragment (1-374) provides a valuable tool for researchers aiming to elucidate the protein's structure, interactions, and potential biological roles.
