Recombinant F124B protein (His tag)

Catalog Number	545944
Species	Human
Expression System	E. coli
Accession	Q9H5Z6
Molecular Weight	Predictes a molecular mass of 30.03 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 30 kDa band.

Product Information

Sequence Region	1-247
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>90%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 1-247 aa (Q9H5Z6) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Recombinant Human Protein FAM124B (Fragment 1-247) is a high-purity, soluble protein fragment designed for structural and biochemical studies. This fragment was computationally optimized for stability and solubility, making it an ideal tool for researchers investigating the functional domains of FAM124B. Protein FAM124B, encoded by the gene FAM124B in Homo sapiens, is localized to the nucleus, as indicated by experimental evidence. While a detailed functional summary is not available, its nuclear localization suggests potential roles in nuclear processes. The provided fragment (residues 1-247) represents a stable, soluble unit selected for experimental applications, facilitating research into the protein's structural characteristics and interactions.
