# Recombinant FHOD3 protein (His tag)

| | |
|---|---|
| **Catalog Number** | 547384 |
| **Synonyms** | Formactin-2; Formin homolog overexpressed in spleen 2; hFHOS2 |
| **Species** | Human |
| **Expression System** | E. coli |
| **Accession** | Q2V2M9 |
| **Molecular Weight** | Predictes a molecular mass of 42.96 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 45 kDa band. |

## Product Information

| | |
|---|---|
| **Sequence Region** | 918-1275 |
| **Form** | Lyophilized powder |
| **Formulation** | Lyophilized from sterile PBS, pH 7.4 |
| **Purity** | >88%, by SDS-PAGE with Coomassie Brilliant Blue staining. |
| **Endotoxin** | Not tested. |
| **Activity** | Not tested. |
| **Stability** | Samples are stable for up to twelve months from date of receipt at -70℃ |
| **Protein Construction** | DNA encoding 918-1275 aa (Q2V2M9) were fused with 6His tag. |

## Storage & Handling

| | |
|---|---|
| **Reconstitution** | Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. |
| **Storage** | Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |
| **Shipping** | In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature.<br>Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise. |

## Description

| | |
|---|---|
| **Description** | Recombinant FH1/FH2 domain-containing protein 3 (Formactin-2), derived from Homo sapiens, is a highly purified fragment (residues 918-1275) optimized for stability and solubility. This product supports structural and biochemical studies of actin cytoskeleton organization, offering researchers a reliable tool for investigating cellular mechanics and protein interactions.<br>FH1/FH2 domain-containing protein 3, encoded by the FHOD3 gene, is an actin-organizing protein implicated in stress fiber formation and cell elongation. According to functional studies, it plays a critical role in actin filament polymerization, particularly in cardiomyocytes, where isoform 4 contributes to myofibril structure. The protein localizes predominantly to the cytoskeleton, associating with actin fibers, while isoform 4 specifically targets the sarcomere Z line in cardiomyocytes, dependent on threonine phosphorylation. This localization underscores its importance in cellular architecture and muscle function, making it a key target for research in cell biology and cardiovascular health. |
