

Human CIRBP / Cold-inducible RNA-binding Protein (His Tag)

Catalog Number: 502184

General Information

Gene Name Synonym

A18 hnRNP; Glycine-rich RNA-binding protein CIRP

Protein Construction

A DNA sequence encoding the human CIRBP (Q14011) (Met1-Glu172) was expressed with a polyhistidine tag at the N-terminus.

Organism

Human

Expression Host

E. coli

QC Testing

Purity

> 90 % as determined by SDS-PAGE

Endotoxin

Please contact us for more information.

Stability

Samples are stable for up to twelve months from date of receipt at -70°C

Predicted N terminal

His

Molecular Mass

The recombinant human CIRBP consists of 187

amino acids and predicts a molecular mass of 20.5 KDa. It migrates as an approximately 23 KDa band in SDS-PAGE under reducing conditions.

Formulation

Lyophilized from sterile 20mM Tris, 500mM NaCl, 0.25M Imi, 20% glycerol.

1. 5 % trehalose and mannitol are added as protectants before lyophilization.
2. Please contact us for any concerns or special requirements.

Usage Guide

Storage

Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

Reconstitution

Adding sterile water, prepare a stock solution of 0.25 mg/ml. Concentration is measured by UV-Vis.

SDS-PAGE

Human CIRBP / Cold-inducible RNA-binding Protein (His Tag) SDS-PAGE
