

Human Urokinase/PLAU (His Tag) recombinant protein

Catalog Number: 503537

General Information

Protein Construction

A DNA sequence encoding the human PLAUI (NP_002649.1) (Met 1-Leu 431) with a C-terminal polyhistidine tag was expressed.

Organism

Human

Expression Host

Human Cells

QC Testing

Activity

Measured by its binding ability in a functional ELISA. Immobilized human uPA at 5 µg/ml (100 µl/well) can bind mouse PLAUI with a linear range of 1.6-40 ng/ml.

Purity

> 97 % as determined by SDS-PAGE

Endotoxin

< 1.0 EU per µg of the protein as determined by the LAL method

Stability

Samples are stable for up to twelve months from date of receipt at -70°C

Predicted N terminal

Ser 21

Molecular Mass

The secreted recombinant human PLAUI comprises

422 amino acids with a predicted molecular mass of 46 kDa. As a result of glycosylation, rhPLAUI migrates as three bands corresponding to the long A chain, B chain and unprocessed full-length PLAUI with the molecular mass of 18, 32 and 50 kDa respectively in SDS-PAGE under reducing conditions.

Formulation

Lyophilized from sterile PBS, pH 7.4

1. 5 % trehalose and mannitol are added as protectants before lyophilization.

2. Please contact us for any concerns or special requirements.

Usage Guide

Storage

Store it under sterile conditions at -20°C to -80°C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

Reconstitution

Adding sterile water, prepare a stock solution of 0.25 mg/ml. Concentration is measured by UV-Vis.

SDS-PAGE

Human Urokinase / PLAUI Protein (His Tag) SDS-PAGE
