# Mouse Smad1 (NM 008539) cDNA/ORF clone

Catalog Number: 708973-3

#### **General Information**

**Gene Name:** 

SMAD family member 1

Official Symbol: Smad1

Organism: Mus musculus

**RefSeq:** NM 008539

### Description

#### **Sequence Description:**

Identical with the Gene Bank Ref. ID sequence.

**Vector:** pEXP-C-FLAG

#### **Restriction Sites:**

#### **Shipping carrier:**

Each tube contains approximately 5  $\mu$ g - 10  $\mu$ g of lyophilized plasmid.

#### Storage:

The lyophilized plasmid can be stored at ambient temperature for three months.

#### **Quality control:**

The plasmid is confirmed by full-length sequencing with primers in the sequencing primer list.

#### **Sequencing primer list:**

T7:TAATACGACTCACTATAGGG

**BGH:**TAGAAGGCACAGTCGAGG

# Plasmid Resuspension protocol

1.Centrifuge at 5,000×g for 5 min.

2. Carefully open the tube and add 20  $\mu$ l of sterile water to dissolve the DNA.

- 3.Close the tube and incubate for 10 minutes at room temperature.
- 4.Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than  $5000 \times g$ .
- 5.Store the plasmid at -20 °C.

# The plasmid is ready for:

Restriction enzyme digestion; PCR amplification; E. coli transformation; DNA sequencing

# E.coli strains for transformation (recommended but not limited):

Most commercially available competent cells are appropriate for the plasmid, e.g. TOP10, DH5 $\alpha$  and TOP10F $^{\prime}$ .

#### **Vector Information**

All of the pEXP vectors are designed for high-level stable and transient expression in mammalian hosts. High-level stable and non-replicative transient expression can be carried out in most mammalian cells. The vectors contain the following elements:

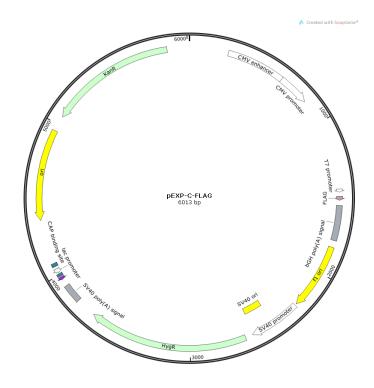

- Human enhanced cytomegalovirus immediateearly (CMV) promoter for high-level expression in a wide range of mammalian cells.
- Hygromycin resistance gene for selection of mammalian cell lines.
- A Kozak consensus sequence to enhance mammalian expression.
