pYES2/CT

Vector ID	V010207
Antibiotic Resistance	Ampicillin
Length	5963 bp
Vector Type	Yeast Plasmids

Product Information

Replication Origin	ori
Source/Author	Invitrogen (Life Technologies)
Copy Number	High copy number
Promoter	GAL1
Growth Temperature	37℃
Comment	pYES2/CT is a high-copy yeast expression vector derived from pYES2, featuring the URA3 selection marker, GAL1 promoter for galactose-inducible expression, C-terminal V5 epitope and 6xHis tag for detection/purification, and ampicillin resistance.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
