pBluescript II KS(+)

Vector ID	V011758
Antibiotic Resistance	Ampicillin
Length	2961 bp
Vector Type	I.M.A.G.E. Consortium Plasmids

Product Information

Replication Origin	ori
Source/Author	Alting-Mees MA, Short JM.
Copy Number	High copy number
Promoter	T3
5' Primer	M13 fwd
3' Primer	M13 rev
Growth Strain(s)	DH10B
Comment	pBluescript II KS(+) is a small (~2.96 kb), high-copy phagemid that doesn't make protein from your insert — it just holds it safely, copies it cheaply, and lets you check it from every angle before you move it anywhere else.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
