pDendra2-C

Vector ID	V012055
Antibiotic Resistance	Kanamycin
Length	4716 bp
Vector Type	Fluorescent Protein Genes & Plasmids

Product Information

Replication Origin	ori
Source/Author	Clontech
Selection Marker	Neomycin/G418(Geneticin)
Copy Number	High copy number
Promoter	CMV
Comment	pDendra2-C is a mammalian expression vector with CMV promoter, N-terminal Dendra2 photoconvertible fluorescent protein fusion, Kan/Neo resistance, for live-cell protein tracking and localization studies using photoconversion.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
