pBAD24

Vector ID	V012783
Antibiotic Resistance	Ampicillin
Length	4617 bp
Vector Type	E.coli expression plasmid

Product Information

Replication Origin	ori
Source/Author	Beckwith Lab
Copy Number	High copy number
Promoter	araBAD
Cloning Method	Enzyme Cut
5' Primer	pBAD-F: ATGCCATAGCATTTTTATCC
3' Primer	pBAD-R: gatttaatctgtatcagg
Growth Strain(s)	DH10B
Expression Method	L-arabinose Induced
Comment	pBAD24 is a high-copy E.coli expression plasmid that places your gene under the PBAD promoter — the native E.coliarabinose operon promoter — giving you extremely tight OFF → precisely tunable ON control, with no special strain required (unlike the T7/pET system).

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
