pLpp-OmpA

Vector ID	V012852
Accession ID	pLLP-OmpA
Antibiotic Resistance	Ampicillin
Length	7533 bp
Vector Type	Protein expression
Host	E. coli

Product Information

Replication Origin	ori
Promoter	T7
Growth Strain(s)	DH10B
Growth Temperature	37℃
Comment	The plasmid vector pLpp-OmpA is a derivative of pET-26b (carrying kanamycin resistance) that contains the Lpp-OmpA fusion gene. It was constructed by digesting and ligating the fusion gene from pGEM-JR into pET-26b, and is designed for the surface display of protein E in E. coli.

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
