p15A-Ptet-dacA-KanR

Vector ID	V013889
Antibiotic Resistance	Kanamycin
Length	3787 bp
Vector Type	Protein expression
Host	E. coli

Product Information

Replication Origin	p15A ori
Promoter	tetR/tetAs
Growth Strain(s)	DH10B
Growth Temperature	37℃
Comment	p15A-Ptet-dacA-KanR is a plasmid that enables low-copy replication in Escherichia coli using the p15A replicon, initiates transcription of target genes via the Tet promoter, and allows selection of plasmid-containing cells through KanR, thereby achieving the expression of target proteins.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
