pHSP02

Vector ID	V016730
Antibiotic Resistance	Kanamycin
Length	14102 bp
Vector Type	Gene knockout
Host	Lactic acid bacteria

Product Information

Replication Origin	pSC101 ori
Selection Marker	Erm
Copy Number	Low Copy
Promoter	P11
Growth Strain(s)	DH5a
Growth Temperature	30℃
Comment	Kanamycin, 25 μg/mL; Growth temperature: 30℃. Rep101(Ts) is a temperature-sensitive replication protein that functions only at low temperatures. Above 37°C, it becomes inactive, causing plasmid loss. Stable replication occurs at 30°C, >16 hours (or lower, e.g., 28–30°C). Please do not exceed 32°C.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
