pcDNA3.1-ACTB(human)-EGFP

Vector ID	V021693
Accession ID	NM_001101.5
Antibiotic Resistance	Ampicillin
Length	7265 bp
Vector Type	Protein expression
Host	Mammalian cells

Product Information

Replication Origin	ori
Selection Marker	Neo/G418;EGFP
Promoter	CMV
Fusion Tag	EGFP
Growth Strain(s)	DH10B
Expression Method	Transient
Comment	pcDNA3.1-ACTB(human)-EGFP is a 7265 bp mammalian expression vector. It is designed for expressing the human ACTB gene fused with EGFP, driven by a strong CMV promoter. A NeoR/KanR gene under the SV40 promoter allows for antibiotic selection. The vector also includes an f1 ori for single-stranded DNA production and an AmpR/ori cassette for bacterial propagation.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 µl for 5 µg plasmid, and 100 µl for 100 µg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
