pLV3-CMV-Blast-KAT2B(human)-HA

Vector ID	V040071
Accession ID	NM_003884.5
Antibiotic Resistance	Ampicillin
Length	9776 bp
Vector Type	Protein expression
Host	Mammalian cells, Lentivirus

Product Information

Replication Origin	ori
Selection Marker	Blast
Copy Number	High
Promoter	CMV
5' Primer	CMV-F
Fusion Tag	HA
Growth Strain(s)	Stbl3
Growth Temperature	37℃
Expression Method	Constiutive, Stable / Transient
Comment	This is a 9776 bp third-generation lentiviral vector, pLV3-CMV-Blast-KAT2B(human)-HA. It is designed to express the human KAT2B gene (NM_003884) fused with an HA tag, driven by the strong CMV promoter. The vector includes the EF-1α core promoter for efficient transgene expression, the Blasticidin resistance gene (BSD) for mammalian cell selection, and essential HIV-1 packaging elements (Ψ, RRE, cPPT/CTS). It also features the WPRE element to enhance mRNA stability and expression.

Vector Map

Plasmid Resuspension Protocol

1. Centrifuge at 5,000×g for 5 min.
2. Carefully open the tube and add sterile water to dissolve the DNA: add 20 μl for 5 μg plasmid, and 100 μl for 100 μg plasmid.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin to concentrate the liquid at the bottom. Speed is less than 5000×g.
5. Store the plasmid at -20 ℃.
