Recombinant YBEY protein (His tag)

Catalog Number	548940
Species	Human
Expression System	E. coli
Accession	P58557
Molecular Weight	Predictes a molecular mass of 20.95 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 21 kDa band.

Product Information

Sequence Region	1-167
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>86%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 1-167 aa (P58557) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Recombinant Human Endoribonuclease YbeY (EC 3.1.-.-) fragment (residues 1-167) is a high-purity, soluble protein designed for structural and biochemical studies. This fragment represents a stable, functionally relevant domain ideal for investigating rRNA maturation mechanisms. Endoribonuclease YbeY is a single strand-specific metallo-endoribonuclease essential for ribosomal RNA (rRNA) maturation, as supported by experimental evidence (PubMed:28153719). The full-length protein localizes to the nucleus (PubMed:22042635), where it plays a critical role in ribosome biogenesis and RNA processing. This recombinant fragment (1-167) encompasses key structural domains, enabling targeted analysis of its endoribonuclease activity and contributions to cellular RNA metabolism.
