Recombinant CS085 protein (His tag)

Catalog Number	552050
Species	Human
Expression System	E. coli
Accession	A0A1B0GUS0
Molecular Weight	Predictes a molecular mass of 12.30 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 12 kDa band.

Product Information

Sequence Region	1-96
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>89%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 1-96 aa (A0A1B0GUS0) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	This product is a high-quality recombinant protein fragment of human Uncharacterized protein C19orf85 (amino acids 1-96). The fragment has been computationally designed for optimal stability and solubility, making it an ideal reagent for structural biology studies and functional characterization of this novel protein. Uncharacterized protein C19orf85 is a human protein encoded by the C19orf85 gene. As an uncharacterized protein, its specific biological function and subcellular localization are currently unknown, representing a novel target for research. Investigating this protein may contribute to understanding new cellular pathways and protein functions. The provided recombinant fragment (1-96) offers a valuable tool for initiating these studies, enabling researchers to explore its biochemical properties and potential interactions.
