# Recombinant FLP13 protein (His tag)

| | |
|---|---|
| **Catalog Number** | 531981 |
| **Species** | Caenorhabditis elegans |
| **Expression System** | E. coli |
| **Accession** | O44185 |
| **Gene ID** | 177547 |
| **Molecular Weight** | Predictes a molecular mass of 19.39 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 19 kDa band. |

## Product Information

| | |
|---|---|
| **Sequence Region** | 1-160 |
| **Form** | Lyophilized powder |
| **Formulation** | Lyophilized from sterile PBS, pH 7.4 |
| **Purity** | >85%, by SDS-PAGE with Coomassie Brilliant Blue staining. |
| **Endotoxin** | Not tested. |
| **Activity** | Not tested. |
| **Stability** | Samples are stable for up to twelve months from date of receipt at -70℃ |
| **Protein Construction** | DNA encoding 1-160 aa (O44185) were fused with 6His tag. |

## Storage & Handling

| | |
|---|---|
| **Reconstitution** | Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. |
| **Storage** | Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |
| **Shipping** | In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature.<br>Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise. |

## Description

| | |
|---|---|
| **Description** | Recombinant FMRFamide-like neuropeptides 13 fragment from Caenorhabditis elegans, encompassing amino acids 1-160. This stable and soluble fragment is ideal for investigating neuropeptide signaling, sleep regulation, and muscle function in research applications.<br>FMRFamide-like neuropeptides 13 (flp-13) is a secreted neuropeptide precursor in C. elegans that undergoes cleavage to produce multiple bioactive peptides. These neuropeptides function as ligands for neuronal receptors including dmsr-1 and npr-22, playing crucial roles in stress-induced sleep promotion and modulation of somatic muscle tension. Specific cleavage products such as AADGAPLIRF-amide and APEASPFIRF-amide have demonstrated inhibitory effects on muscle activity and pharyngeal function. The protein coordinates with other neuropeptides like flp-24 and nlp-8 to regulate behavioral responses to cellular stress, making it an important target for neurobiology and physiology research. |
