Recombinant NTM2B protein (His tag)

Catalog Number	551789
Species	Human
Expression System	E. coli
Accession	A6NNL0
Molecular Weight	Predictes a molecular mass of 13.26 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 14 kDa band.

Product Information

Sequence Region	329-422
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>88%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 329-422 aa (A6NNL0) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	This product is a high-quality recombinant protein fragment of human NUT family member 2B (NUTM2B), comprising amino acids 329-422. The 94-amino acid fragment was computationally designed for optimal stability and solubility, making it an ideal reagent for structural studies, biochemical assays, and functional characterization. NUT family member 2B (NUTM2B) is a human protein encoded by the NUTM2B gene. While specific functional and subcellular localization data for the full-length protein are not fully characterized in the provided information, proteins within the NUT family are often involved in transcriptional regulation and chromatin organization. The provided fragment represents a stable, soluble unit selected for experimental analysis, offering researchers a valuable tool to investigate the structure and biochemical properties of this protein region.
