Recombinant F240B protein (His tag)

Catalog Number	552052
Species	Human
Expression System	E. coli
Accession	A0A1B0GVZ2
Molecular Weight	Predictes a molecular mass of 11.40 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 13 kDa band.

Product Information

Sequence Region	1-78
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>87%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 1-78 aa (A0A1B0GVZ2) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Introducing our high-quality recombinant protein: Human FAM240B (1-78). This product features a stable, soluble fragment of the FAM240B protein, expertly designed for structural biology and functional studies. The 78-amino acid fragment is ideal for researchers investigating protein-protein interactions, domain architecture, and biochemical characterization. Protein FAM240B, encoded by the gene FAM240B, is a human protein of significant research interest. While the specific molecular function and subcellular localization of the full-length protein are areas of active investigation, FAM240B represents a valuable target for understanding novel cellular pathways and protein families. This recombinant fragment provides a crucial tool for advancing the functional annotation and structural understanding of this protein.
