Recombinant PYGO1 protein (His tag)

Catalog Number	546313
Species	Human
Expression System	E. coli
Accession	Q9Y3Y4
Molecular Weight	Predictes a molecular mass of 10.63 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 11 kDa band.

Product Information

Sequence Region	337-419
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>85%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 337-419 aa (Q9Y3Y4) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Recombinant Human Pygopus homolog 1 (PYGO1) Fragment (337-419) is a high-quality, stable protein fragment designed for structural and biochemical studies. This 83-amino acid soluble unit supports research into Wnt signaling pathways, offering researchers a reliable tool for investigating protein interactions and mechanisms. Pygopus homolog 1 (PYGO1) is a human protein encoded by the gene PYGO1 and is involved in signal transduction through the Wnt pathway, which plays critical roles in cell proliferation, differentiation, and development. The protein is localized to the nucleus, where it participates in transcriptional regulation and chromatin remodeling as part of Wnt-mediated signaling processes. This recombinant fragment provides a focused approach to studying PYGO1's functional domains and interactions within this essential pathway.
