# Recombinant PP2D1 protein (His tag)

| | |
|---|---|
| **Catalog Number** | 551083 |
| **Species** | Human |
| **Expression System** | E. coli |
| **Accession** | A8MPX8 |
| **Molecular Weight** | Predictes a molecular mass of 31.56 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 32 kDa band. |

## Product Information

| | |
|---|---|
| **Sequence Region** | 62-322 |
| **Form** | Lyophilized powder |
| **Formulation** | Lyophilized from sterile PBS, pH 7.4 |
| **Purity** | >87%, by SDS-PAGE with Coomassie Brilliant Blue staining. |
| **Endotoxin** | Not tested. |
| **Activity** | Not tested. |
| **Stability** | Samples are stable for up to twelve months from date of receipt at -70℃ |
| **Protein Construction** | DNA encoding 62-322 aa (A8MPX8) were fused with 6His tag. |

## Storage & Handling

| | |
|---|---|
| **Reconstitution** | Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. |
| **Storage** | Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles. |
| **Shipping** | In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature.<br>Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise. |

## Description

| | |
|---|---|
| **Description** | Recombinant Human PP2D1 Protein Fragment (62-322) - A high-quality, soluble protein fragment of Protein phosphatase 2C-like domain-containing protein 1, specifically engineered for structural biology and biochemical studies. This 261-amino acid fragment represents a stable, well-folded region ideal for investigating protein function and interactions.<br>Protein phosphatase 2C-like domain-containing protein 1 (PP2D1) is encoded by the PP2D1 gene in humans. While specific functional details and subcellular localization information for the full-length protein are not fully characterized, proteins containing PP2C-like domains typically function as serine/threonine protein phosphatases involved in various cellular signaling pathways. This recombinant fragment was computationally selected to provide researchers with a stable, soluble protein unit suitable for advancing our understanding of this protein's structural and functional properties. |
