Recombinant HBD protein (His tag)

Catalog Number	541996
Synonyms	Delta-globin; Hemoglobin delta chain
Species	Human
Expression System	E. coli
Accession	P02042
Molecular Weight	Predictes a molecular mass of 17.58 kDa. In SDS-PAGE under reducing conditions, it migrates as an approximately 18 kDa band.

Product Information

Sequence Region	2-147
Form	Lyophilized powder
Formulation	Lyophilized from sterile PBS, pH 7.4
Purity	>89%, by SDS-PAGE with Coomassie Brilliant Blue staining.
Endotoxin	Not tested.
Activity	Not tested.
Stability	Samples are stable for up to twelve months from date of receipt at -70℃
Protein Construction	DNA encoding 2-147 aa (P02042) were fused with 6His tag.

Storage & Handling

Reconstitution	Reconstitute at 0.25 μg/μl in sterile water for short-term storage. Reconstitution with 50% glycerol solution is recommended for longer term storage (see Stability and Storage for more details). If a different concentration is needed for your purposes please adjust the reconstitution volume as required (please note: the ion concentration of the final solution will vary according to the volume used). Note: Centrifuge vial before opening. When reconstituting, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution.
Storage	Store it under sterile conditions at -20℃ to -80℃. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.
Shipping	In general, recombinant proteins are provided as lyophilized powder which are shipped at ambient temperature. Bulk packages of recombinant proteins are provided as frozen liquid. They are shipped out with blue ice unless customers require otherwise.

Description

Description	Recombinant Human Hemoglobin subunit delta (Delta-globin) fragment (aa 2-147) is a high-purity protein designed for oxygen transport research. This 146-amino acid fragment fully encompasses the functional Globin domain, making it an ideal tool for studying hemoglobin function and oxygen-binding mechanisms. Hemoglobin subunit delta is involved in oxygen transport from the lung to various peripheral tissues. As a component of hemoglobin, this protein plays a critical role in the respiratory system by facilitating the efficient delivery of oxygen throughout the body. The delta subunit contributes to the structural and functional properties of hemoglobin complexes, enabling proper oxygen binding and release in different physiological conditions.
